### **Responding to Craft Entry: Evidence from Consumer Packaged Goods** (*available mid-November*)

Over the last 30 years the consumer packaged goods (CPG) industry, once dominated by 2-3 “legacy” firms in each product category, has experienced a large degree of “craft” or “independent” entry. Legacy firms have responded to this entry by both (1) acquiring craft producers, and (2) introducing new brands that closely resemble the characteristics of craft products. I study this phenomenon in two product categories: yogurt and beer. Using grocery scanner data and a novel empirical characterization of the product space I first document how the product portfolios of firms evolved from 2006-2020. I then develop and estimate a dynamic model of quality investment, where firms choose how to expand both their offerings and geographic footprints across different market segments. As an example application, I present counterfactual analysis in which legacy producers are barred from entering new market segments.
